7. French teaches persistent network connections that can survive logoff and persist across logon. It discloses a method that requires persistent connections software resident on the client device (see French's column 2, lines 34-36), and requires that data structures in support of the persistent connection be stored at the client device (see French's column 6, lines 40-45). However, French does not teach the method implemented in a server, and determining whether recovery will be accomplished by rebooting the server or takeover by another server, when taken in the context of claims as a whole, is not uncovered by French and Kemp. Moreover, evidence for the modifying the prior art teachings by one of ordinary skill level in the art was not uncovered so as to result in the invention as recited in claims 1 and 22.
